About Me

Computer Science student at Vishwakarma Institute of Technology, Pune. Dedicated and performance-driven individual aiming to utilize critical thinking, adaptability, and teamwork skills to contribute effectively in dynamic and growth-oriented environments.

Education

- Vishwakarma Institute of Technology**
Bachelor of Technology in Computer Engineering; CGPA: 8.9
Pune, India
Sep. 2024 – Present
- Navjeevan Convent & English School**
10th; Percentage: 97.20%
Sakoli, India
Aug. 2021 - May 2022
- Krushnamurari Katakwar Highschool**
12th; Percentage: 87.33%
Sakoli, India
Aug. 2023 - May 2024

Projects

- AQI Monitoring System**
Developed an IoT-based system to measure and monitor air quality levels in real-time using MQ gas sensors, PM2.5 sensors, and DHT22 temperature-humidity sensors. The collected data was transmitted to the Blink IoT platform for live visualization and alert generation during critical pollution levels, promoting environmental awareness and safety.
Tech Stack: Arduino, Blink IoT, MQ Sensors, PMS7003, DHT22, C++, IoT Cloud
- Federated Learning Framework for Privacy-Preserving Autism Detection**
Developed a privacy-preserving federated learning framework for autism detection using facial image analysis across multiple decentralized datasets. Implemented client-side model training without sharing raw data, ensuring data privacy while improving cross-cultural model generalization. Compared multiple deep learning architectures and achieved high classification performance through federated optimization.
Tech Stack: Python, TensorFlow, Flower Framework, MobileNetV2, EfficientNetB0, EfficientNetB4, OpenCV, NumPy
- Neuro-Symbolic Agentic AI for Concept-Level Learning & Misconception Repair**
Designed and developed an intelligent tutoring system that combines symbolic reasoning with autonomous AI agents to identify conceptual misconceptions, generate personalized explanations, and recommend adaptive learning paths.
Tech Stack: Python, Knowledge Graphs, Rule-Based Reasoning, Agentic AI, Neuro-Symbolic AI
- Outline-Based Object Detection System**
Developed an image recognition model that detects and classifies objects based on their shape outlines rather than color or texture features. The model utilized edge detection and contour-based segmentation for robust performance under varied lighting conditions.
Tech Stack: Python, OpenCV, NumPy, Webcam

Skills

- Languages :** C, C++, Python, SQL
- Web Technologies:** HTML5, CSS, JavaScript
- Database :** MYSQL
